

Lightpath

Wireless Internet Connectivity

Lightpath Wireless Internet Connectivity helps organizations manage risk by providing Internet connectivity backup in the event of an outage. This cost-effective managed 5G service includes a cost-effective unlimited data plan while helping to satisfy business continuity and disaster recovery (BCDR) needs.

Lightpath Managed Wireless Internet Connectivity

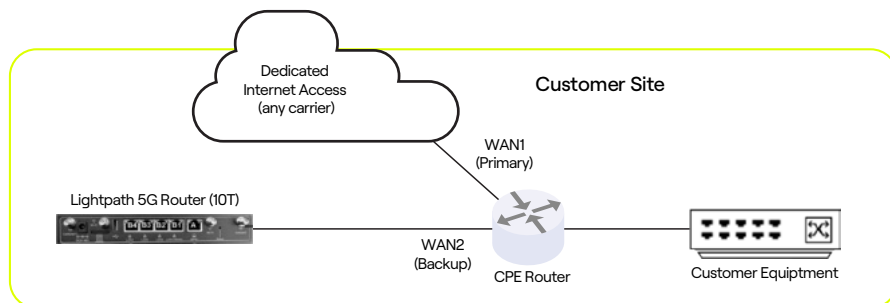

Lightpath managed switching/failover.

Lightpath Customers can also use Wireless Internet Connectivity as a primary Internet connection, which is helpful in situations where fast and reliable Internet connectivity is needed but fiber-based Internet is not available.

Wireless Internet Connectivity

Lightpath Customers can use Wireless Internet Connectivity as a primary or secondary connection. Customer is responsible for switching/failover management.
